ACROSS

1. The study of the safety of marketed drugs under the practical conditions of clinical usage in large communities. (abbrev.)
2. Main focus of pharmacovigilance.
3. The reported information on a possible causal relationship between an adverse event and a medicine.
4. A response to a medicine which is noxious and unintended, and which occurs at doses normally used in humans. (abbrev.)
5. One of the barriers affecting ADR reporting.

DOWN

1. Web-based tool maintained by the UMC for database management of individual case safety reports.
2. The withdrawal of a drug from a patient.
3. Type of evaluation of the likelihood that a medicine was the causative agent of an observed adverse reaction.
4. The voluntary or inadvertent re-administration of a medicine suspected of causing an adverse reaction.
